UL Classification

In 1994, Sunstar was the first to receive UL Classification. The covers are classified for ASTM Safety on all sizes, densities, and models, even swim spas.

Marine Grade Vinyl

The vinyl is treated with mildew and UV inhibitors for overall longevity and beauty. The vinyl has a negative 20 degree cold crack rating and is tested to 1500 UV hours.

Steel Reinforcement

20 gauge "C" non-corrosive steel channel provides strong support across the center of the spa cover, giving extra support in areas that experience extreme weather.

Premiere Spa Skirt

The double stitched skirt enables extreme heat buildups between the skirt and the outer lip to escape, preventing heat damage from occurring while preventing any dirt from entering the spa.

Hinges

The Tough 'n' Sturdy hinge offers four layers of vinyl, adding extra durability and strength to this high-stress area.

Heat Seal Gasket

The revolutionary insulating gasket seal prevents heat loss where the two cover halves fold together. The halves seal automatically which is critical to long-term energy savings.

Nylon Drain Grommet

"Low profile" grommets prevent water from accumulating between the vinyl and the foam core. The grommets are designed not to protrude; therefore they won't scratch the lip of the spa cover.

Virgin Foam Cores

Many competitors use regrind in their foam cores to save them money. Sunstar uses only virgin foam cores which saves you money-and provides you a stronger more durable, more energy-efficient cover.

Commercial Grade Zipper

Sunstar uses a true YKK#7 heavy-duty nylon zipper that is corrosion resistant. The zippers are covered with a vinyl protective flap along the entire length of the zipper.

Double Ply Poly-Laminate

The underside of the covers are made using this strong mildew resistant material. This product is so sturdy that it is used throughout the cover for extra internal reinforcement.

Vapor Lock Seal

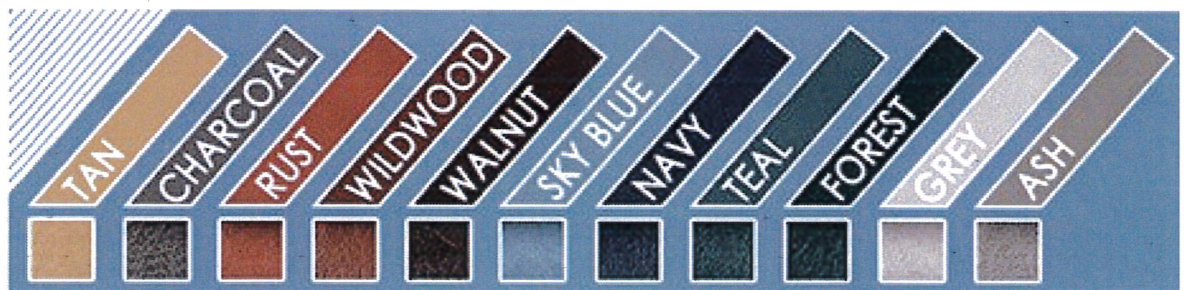

State-of-the-art equipment is used to heat seal the cores with Antaeus 2000™. Scientifically formulated plastic was developed exclusively for Sunstar to inhibit moisture absorption.

Handles

Engineered to add strength where needed most. The handles are fully integrated into the spa cover with additional stitching and internal reinforcing making them one of the strongest available on the market.
